I am getting an error message with the ILLiad Fill Rate Statistics

Last updated: Fri, 15 Apr 2022 22:02:34 GMT

Symptom

• Getting error when running the Lending Fill Rate Statistics.

Applies to

• ILLiad

Resolution

When you get an error message with the Lending Fill Rate Statistics, it is probably there because there is a Transaction without a Transaction Status. Here is how you fix this:

1. To find the Transaction, you do a Custom Request Search.

2. Go to "Home, " and then there is a box on the top left and a magnifying glass and then a drop-down arrow and below that there is a tiny box. Click on the tiny box.

3. In the Custom Request Search, you click on the "+" beside the "and" to see a field called Transactions.TransactionNumber. You click on that field, and the Table is Transactions. You then click on the Field TransactionStatus.

4. After that, click on the Contains option and choose "Is Blank.".

5. Then add another field and select the transaction table. In the box to the right select Process Type. In the Contains option select = Lending.

5. You will see any of the Lending requests that do not have a Transaction Status. You will need to give a transaction status to each request such as Request Finished. Then you will be able to run the report.

The request was incomplete coming in, so you cannot do anything with the request because it will be empty. If this does not solve your issue contact OCLC Support.
