I want to set up to disallow items to be renewed if they are overdue via SIP2 Manager for my DIY loan kiosks

Last updated: Tue, 02 Apr 2019 03:31:06 GMT

Applies to

- Amlib SIP2 Manager
- Amlib DIY loan kiosk

Answer

You need to have a parameter set within the relevant incidence and ensure that the relevant messages use this parameter.

This parameter only needs to exist on the Parameter table. Leave as a Constant source and will be checked at the time if it is chosen as a parameter to check.

The Parameter is in the standard set of 3M parameters but if you need to add it as a new parameter follow these steps:

1. Highlight the relevant instance and select Edit Parameters.
2. Press **F1 New**.
3. Enter the description **Allow Renew of Overdue item**.
4. Enter the message: **This item is overdue and may not be renewed**.
5. Set the main Type to be **Item**.
6. Enter the Source Type to be **Constant**.
7. Set the Null Value to be **Not Allowed**.
8. Enter **Y** in the Source Value.
9. Set the Target Type to be **String Value**.
10. Set the Operator to be **Equal**.
11. Enter **Y** in the Target Value.
12. Click **Apply**.
13. Click **OK**.

Edit the relevant Messages (for example 12,30,66) to use this Parameter to Check.
Additional information

- Ensure the Messages do not use the Parameter to Process "RenewOverdueItem" as that will cause a conflict with the parameter and items that are overdue will still be renewed
