A title is not showing up in Discovery unless we search "libraries worldwide."

Last updated: Fri, 26 Aug 2022 12:40:29 GMT

Applies to

• WorldShare Collection Manager
• WorldCat Discovery

Answer

Verify that you have selected the title inside the collection by following these steps:

1. Log in to WorldShare.
2. Click Metadata.
3. Click Collection Manager.
4. Change the search scope to Title.
5. Search for the ISBN or ISSN of the title.
   ◦ You can grab the ISBN or ISSN from the View Description tab of a Discovery search result.
6. If you see no results from the search you have performed in WorldShare Collection Manager, you don't have the title selected.

To see all of the results for the same title, uncheck the box next to "limit by my selected collections" and search again. The collection that you have selected in this set of results may display. If so, can click on the collection title. This allows you to search for the ISBN or ISSN from inside your selected collection.

Additional information

There are multiple methods used to select a title inside a collection. The method you choose is based on the settings of the collection. Refer to modify a collection to select your titles for more information.
