How do we migrate our ILLiad Server to a new server if we are self-hosted?

Last updated: Fri, 17 Apr 2020 18:24:12 GMT

Symptom

- How to migrate an ILLiad server for self-hosted sites

Applies to

- ILLiad

Resolution

The following documentation details how to migrate the server:

1. See the [Running the ILLiad Server Installation Program](https://help.oclc.org/Resource_Sharing/ILLiad/Troubleshooting/Running_the_ILLiad_Server_Installation_Program) documentation.
2. Then the [Migrating an ILLiad Database](https://help.oclc.org/Resource_Sharing/ILLiad/Troubleshooting/Migrating_an_ILLiad_Database) documentation.
3. Self-hosted sites will need to contact [OCLC Support](https://help.oclc.org/Resource_Sharing/ILLiad/Troubleshooting/OCLC_Support) about the credentials needed to get the ILLiad Server installation program.
4. Make sure to follow the instructions for the [Hardware and Software Requirements for Version 9.1](https://help.oclc.org/Resource_Sharing/ILLiad/Troubleshooting/Hardware_and_Software_Requirements_for_Version_9.1) if upgrading to 9.1.
5. To upgrade to 9.0, then follow the [Hardware and Software Requirements for Version 9.0](https://help.oclc.org/Resource_Sharing/ILLiad/Troubleshooting/Hardware_and_Software_Requirements_for_Version_9.0).
6. Make sure to correctly set up the [Server Configuration and Permissions](https://help.oclc.org/Resource_Sharing/ILLiad/Troubleshooting/Server_Configuration_and_Permissions).
7. Make sure the `c:\inetpub\wwwroot\ILLiad` folder has the Users group with the Read, Read&Execute, and List folder contents.
