Why can't I see a CONTENTdm collection on our site home page?

Last updated: Fri, 07 Jan 2022 20:32:20 GMT

**Symptom**

- Although you have a site set up in CONTENTdm Administrator, you can't see it in your web site.

**Applies to**

- CONTENTdm

**Resolution**

There are a couple reasons why you might not see a collection in your web site despite having it set up in CONTENTdm Administration. Is the Collection Status in the CONTENTdm Administration > Collections > <Select your collection> > Profile > Collection status set to Publish? Have you clicked Publish on the Website Configuration tool after making changes to the collection? Are there security restrictions on that collection that don't exist on the others?
